QA TESTING PORTFOLIO: TEST CASES & BUG REPORTS

Tester: Muhammad Rizali Hafizhi | Email: hafizhi46@gmail.com | Location: Indonesia
Tools Used: Jira, Trello, Chrome DevTools, Cross-Browser & Responsive Viewport Testing

PART 1: SAMPLE TEST CASE EXECUTION SUITE

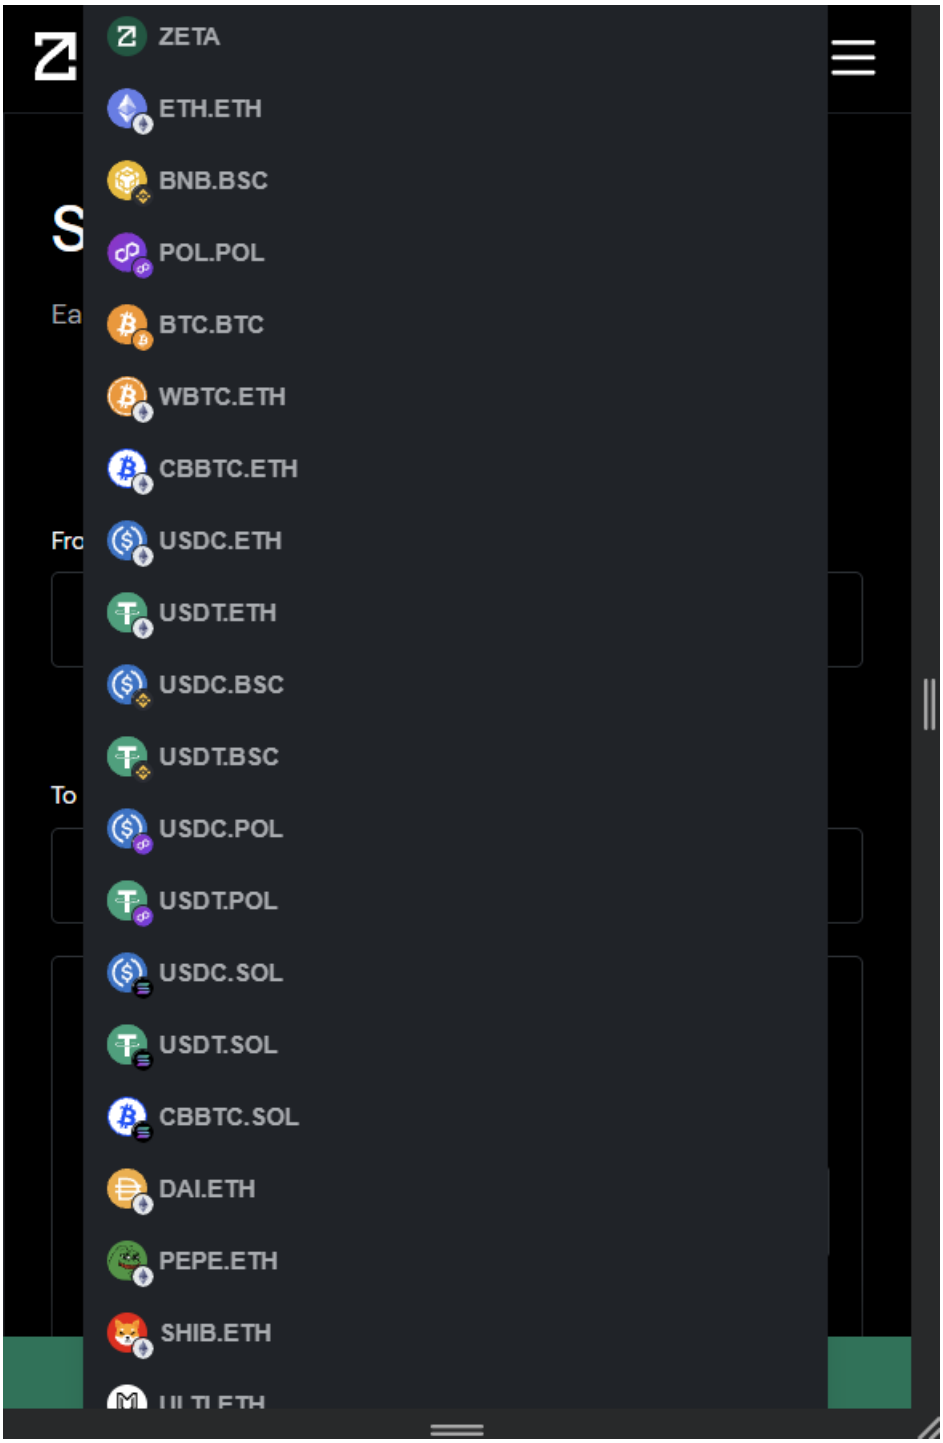

Project Audit: ZetaHub Cross-Chain 'Send' Interface
Test Environment: Windows 11 | Google Chrome (Mobile Viewport Emulation & Responsive View)

Test Case ID	Module	Test Scenario	Expected Result	Status
TC-UI-01	Asset Selection Dropdown	Verify asset selection dropdown on the 'Send' page stays anchored below the input field with a constrained max-height	Dropdown opens directly below the selector field with internal scrolling, matching the 'From' network dropdown behavior	**FAIL (BUG-101)**
TC-UI-02	Source Network Dropdown	Verify 'From' network dropdown (ZetaChain, BSC, Ethereum, etc.) expands cleanly below the selector box on mobile viewports	Dropdown anchors directly under the 'From' input, keeping the header and 'Send' title visible	**PASS**
TC-UI-03	Mobile Header Navigation	Verify top navigation bar ('zetahub' logo and hamburger menu icon) remains accessible on the 'Send' view	Header stays pinned and unobstructed during normal form interaction	**PASS**

PART 2: DETAILED JIRA-STYLE BUG REPORT (ZETAHUB)

BUG-101: [ZetaHub Mobile UI] Asset selection dropdown overflows vertically across the entire viewport, overlapping the top header and clipping bottom items

Bug ID	BUG-101
Severity / Priority	Severity: Minor (UI / Layout & Positioning Defect) | Priority: Medium
Environment	ZetaHub 'Send' Page | Mobile Viewport | Google Chrome
Preconditions	User is on the ZetaHub 'Send' page ('Easily send assets across any connected blockchain') on a mobile viewport.
Steps to Reproduce	1. Navigate to the ZetaHub 'Send' page on a mobile viewport. 2. Tap the 'From' network dropdown (e.g., ZetaChain) and observe how it anchors cleanly below the input field. 3. Tap the token/asset selection dropdown (listing ZETA, ETH.ETH, BNB.BSC, etc.). 4. Observe the vertical positioning and height of the expanded asset list.
Expected Result	Consistent with the 'From' blockchain network dropdown, the asset dropdown menu should stay anchored directly below its trigger input field, respect a constrained max-height, and scroll internally without covering the page header.
Actual Result	Because the asset list contains many tokens (ZETA, ETH.ETH, BNB.BSC down to SHIB.ETH and ULTI.ETH), the unconstrained popover container expands across the full height of the screen—overlapping the top 'zetahub' navigation bar and 'Send' title at the top while clipping the 'ULTI.ETH' item at the bottom edge.
Technical / DevTools Note	The dropdown menu container lacks a constrained max-height (e.g., max-height: 280px; overflow-y: auto) and proper collision/anchor constraints, causing Popper/Floating-UI positioning to stretch the container from the top edge of the viewport to the bottom.
Visual Evidence (Actual Bug vs. Expected Reference)	**Actual Result (Bug: Overflows Top & Bottom)**

ZETA
ETH.ETH
BNB.BSC
POL.POL
BTC.BTC
WBTC.ETH
CBBTC.ETH
USDC.ETH
USDT.ETH
USDC.BSC
USDT.BSC
USDC.POL
USDT.POL
USDC.SOL
USDT.SOL
CBBTC.SOL
DAI.ETH
PEPE.ETH
SHIB.ETH

Expected Behavior (Reference: Anchored Below Input)
